Usage in view definition diagram

Definition

The Software Internal ID is a software's internal ID, which is used by software for identifying the object. This ID is globally unique, i.e. it is extremely unlikely that the same ID would appear on another object in any construction project ever.

Although the user never sees this ID it is important for e.g. managing changes between versions of the model. The user can maintain this ID by modifying the properties of an existing object instead of deleting the object and replacing it with a new one. Sometimes this is not the easiest way to use design software, but it is important from this viewpoint.
